Introduction

Chess is 99% tactics!

If this celebrated observation is true for the master, how much more so for the beginner and club player.

By far and away, the quickest and most effective way to improve your chess performance is to increase your tactical skill so that at a glance you are able to see the typical mating patterns and material-winning tactical motifs that so often decide a game. There is no doubt that the best way to acquire good tactical vision is to do exercises that teach you to recognise the tactical building blocks that make up every combination. This book focuses on the crucial positions that every chess player must know. It cannot be stressed enough that a knowledge of strategy is of little use if you have not first mastered the fundamentals of tactics.

This book starts with hundreds of essential mating positions that train immediate visual recognition; first there are the easier mate in one or two move exercises; then there are exercises for various crucial tactical motifs that must be mastered by any aspiring chess player; these are followed by more demanding positions where these various motifs are often combined.

While the easier problems can be solved without a chess board, we suggest that for the more difficult ones you set up the positions on a board and try to find the solution as if you were playing a real game. You should therefore not touch or move the pieces before having made your decision, perhaps writing down the possible variations before you check the solutions at the back of the book.

The introductions to each chapter are particularly instructive. It is here that we explain the ideas behind crucial tactical motifs such as double attack, the pin and skewer, as well as pawn promotion, drawing techniques, etc.

This book is intended not only for personal use, but also as a course text book. We have thus consulted leading teachers and masters with extensive training experience working in chess academies and club courses so as to best identify the most productive positions and exercises to use.

Double attack

White to move

Solutions on page 127

So far we have looked at lots and lots of mating positions. This is clearly logical as delivering checkmate is the objective of the game. However, checkmate is much easier to achieve when we have an advantage in material, namely more pieces.

Combinations of tactical motifs that force a gain in material occur in virtually every game, and the most important of these motifs are based on some kind of double attack .

However, double attack is most commonly used to describe a position in which one piece attacks two undefended pieces simultaneously and only one of those threatened pieces is able to save itself. It goes without saying that it is rare that in a single move one's opponent can save or protect two attacked pieces. Let's look at an example.

White has just played 1. ♖d5, creating a double attack on the bishop and knight. One of the two pieces will be captured on the next move.

We have already noted that a double attack is very often impossible to meet. However, this is not always the case; in certain positions a fleeing piece can protect another.

In this position, which is almost identical to the preceding one, Black can save both pieces with the simple move 1... ♙d7.

There is also the 'double threat' motif, which arises when at least one of our attacks does not involve the threat of material gain, but instead another type of threat such as checkmate.

In this position White plays 1. ♔e4!, simultaneously threatening checkmate with 2. ♔xh7 and the capture of the rook on a8. Black has no choice but to defend his king, leaving the poor rook to its fate.

In the following example the position of the white king allows a most unpleasant surprise! Black has the luxury of choosing between two moves that not only save both his threatened pieces, but which also win the white rook.

In reply to White's double attack, Black can play either 1... ♙c6, 'pinning' the rook to the king, or launch his own double attack with 1... ♘e3+!

This example teaches us that before making a double attack we have to make sure that our opponent does not have tactical resources of his own.

All the pieces can create a double attack, including the king and the pawn. Perhaps the most dangerous is the knight; its unusual way of moving allows it to attack two pieces without being attacked itself and renders its movements more visually difficult to anticipate!

A double attack by a pawn or a knight is usually called a 'fork'.

In this position White will win one of the two rooks by playing 1. e4.

A classic pawn fork!

As mentioned before, a double attack in the broadest sense is central to most of the tactical motifs discussed in the following chapters; for example, a discovery is no more than a sophisticated form of double attack.

252

Two bishops in danger

Discovered attack

White to move

Solutions on page 128

A discovered attack is a form of double attack where one piece moves to attack another, unmasking an attack by a second piece.

In the above position, the knight can jump to d4, unleashing an attack on the black queen. Black is forced to choose the lesser of two evils, and accept the loss of the bishop on f5.

As always, things do not necessarily work out as we plan, and we must always check carefully that our

opponent does not surprise us with an 'acrobatic' defence.

In the example above White can play 1. $\text{N}d2$, with a discovered attack that threatens both queen and rook. However, the strong reply of 1... $\text{W}c6!$ solves Black's problems; thanks to the threat of mate on g2, Black has sufficient time to save the rook, for example: 2. $e4 \text{ Bxc3}$.

Yet another example of how time and geometry are the fundamental building blocks of chess tactics.

276

Mating attack

Discovered check

White to move

Solutions on page 128

A discovered check occurs when the target of the unmasked piece in a discovered attack is none other than His Majesty himself. As a result they are particularly dangerous.

White plays 1. ♖g5+ with a discovered check, picking up the queen on the next move.

The following examples will give you a even better idea of the devastating power of a discovered check .

In defending his king, White unleashes a discovered check: 1. ♖b1! ... which is indeed checkmate!

The last example is as instructive as it is entertaining.

1. ♖xb5+ ♔a7 2. ♖b7+ ♔a8

The poor black king is forced back to the critical square.

3. ♖xb4+ ♔a7 4. ♖b7+ ♔a8 5. ♖h7+ ♔b8 6. ♖xh5

This series of discovered checks concludes with the capture of a good three pieces.

This nightmare form of déjà vu is called a 'windmill'. Though infrequent, it is one of the most delightful of all tactical motifs.

Mate in 3 to finish things off

Double check

White to move

Solutions on page 129

Double check is a type of discovered check where one piece moves to give check and uncovers another piece that also attacks the king. Needless to say this is a bombshell and two out of the three possible ways of defending the king no longer apply: it is not possible to interpose with a piece, as check arrives from two directions; you cannot capture the checking piece because there are two of them. The only remaining hope is to move the king to a safe square, presuming there is one ...

In the above position White ends the game with the killing 1. ♖c6#. The king's two escape squares are

controlled by the two attacking pieces. It is amusing to note that both the checking pieces are hanging, but because of the power of a double check they are immune from capture.

The following diagram shows the superiority of a double check compared to a normal discovered check.

Black, with an enormous material advantage, hopes to finish things off immediately with 1... ♖c4+?. This would be a grave error, as White can reply with a double check: 2. ♖c5+ ♕c8 (Black cannot capture either the queen on b2 or the knight on c5 due to the double check) 3. ♖h8#

Pin

White to move

Solutions on page 129

When a piece is on the same line of attack as its king, it cannot move. It is 'pinned'. In the following position the black rook is pinned by the white bishop and cannot avoid capture.

Black can try to limit the loss of material by playing 1... ♖c6, after which White should not be hasty: if he contents himself with winning the exchange with 2. ♗xd5+? ♔xd5 he will achieve no more than a draw; whereas if he piles on the pressure with 2. c4!, he will win the rook for nothing on the following move. The rook cannot escape because of the paralysing pin.

The pin is a very common tactical motif that can often lead to a gain in material or mate itself.

In the following position the 'protection' of the king by Black's

pieces is an optical illusion.

However, their presence makes seeing the mating move 1. ♔h6# much more difficult to see.

As with all tactical ideas it is always necessary to anticipate your opponent's reply. In the example above, White has just played 1. ♖g4, taking advantage of the pin to win the knight, but after 1. ♗h5, White's smile will become a frown as he

realises his rook is now itself pinned, with a won game for Black!

When a piece is pinned to the king, we have an absolute pin. If the piece is pinned to any other piece, this is called a relative pin, as it is always possible that it may be opportune for the pinned piece to move and leave the formerly shielded piece to its fate.

In this well known opening variation, it would appear that White can win the d pawn, exploiting the fact that the knight on f6 is pinned to the queen. In fact, 1. ♖xd5? is a blunder, as Black can reply 1... ♗xd5!; and after 2. ♕xd8 ♙b4+! 3. ♔d2 ♕xd2+ 4. ♖xd2 ♔xd8, White finds himself down a piece.

Even with an absolute pin, there are times when the defender can free himself from what appears to be a devastating pin.

In the above position the knight on c6 is pinned to the king by the white bishop and at the same time it is attacked by the pawn on d5.

At first glance the knight looks doomed. However, Black has a typical unpinning manoeuvre at this disposal: 1... a6! 2. ♕a4 (the only move that maintains White's threat; the alternatives 2. ♕xc6+ bxc6 and 2. dxc6 axb5 gain nothing) 2... b5!.

By continuing to harass the white bishop, Black has neutralised the pin; after 3. dxc6 bxa4 or 3. ♙b3 ♗a5 etc, the position remains balanced.

This example teaches us that in the opening a pinned knight on c6 or f6 (c3 or f3 for White) is not something to be overly afraid of. It is only in some cases that it is advisable to prevent the pin with h6 or a6; in many others the prophylactic pawn move is a useless waste of time that creates a potential target.

Often, Black can safely respond to the pinning move ♕g5 by playing ♕e7; otherwise, but only after the arrival of the bishop, Black may choose to 'put the question' to White's bishop with h6.

360

A composed pin

Skewer

White to move

Solutions on page 130

On closer examination a skewer is also a double attack. This is due its x-ray nature; when a more valuable piece moves out of the way of an attack, the attack continues through to a less valuable one. Only long-range pieces can skewer, namely the queen, rook and bishop. King and knight skewers do not exist.

As always, a diagram is worth a thousand words.

By playing 1. ♕h3+, White wins the queen.

As mentioned before, our enthusiasm for a possible tactical opportunity can blind us to a possible defence by our adversary.

The skewer is no exception.

White skewers the king with 1. ♔g2+, but if Black were to play the prudent defence 1... ♖c4, capturing the rook on b7 would be a fatal error. Instead, White must make a move to parry the threat of 2... ♖a5#. This gives Black time to save the rook, with a winning material and positional advantage. Never underestimate your opponent's defensive resources!

Materially minded

384

No defence

Deflection

White to move

Solutions on page 131

Deflection is a tactical motif whose objective is to force a piece away from the defence of another piece or a key square.

The black queen guards the h4 square, which is a role of vital importance as from this square the white queen can force checkmate. By making a deflection sacrifice, White can put his queen on this key square: 1. ♖c8! ♜xc8 (the black queen cannot continue to guard h4, as the squares e7, f6 and g5 are all under White's control) 2. ♛h4+ ♔g8 3. ♛h7#

Deflection, like all tactical motifs, can be combined with other elements, as illustrated in the following position.

With the spectacular 1. ♖e8!!, White initiates a combination that includes deflection and a pin; Black has no choice but to part with his rook to avoid checkmate.

The plight of the black queen is miserable: if 1... ♜b6, there is 2. ♛g7# (the g8 ♜ is pinned); 1... ♜c7 will be met by 2. ♛f6+ followed by mate; after 1... ♜d4 (the only move that parries all the mating threats, but leaves the b8 ♜ undefended), there is 2. ♖3xg8+ ♜xg8 3. ♖xb8 and White has a decisive advantage: the double attack 3... ♛e5+ fails because of 4. f4 (4... ♛xb8 is answered by 5. ♛f6#).

The chess term for describing a piece that has more defensive tasks than it can cope with is 'overloaded'.

408

h4 holds the answer

Decoy sacrifice

White to play

Solutions on page 131

We should always be on the lookout for a sacrifice that draws an opponent's piece onto a critical square. A decoy sacrifice's objective could be to deliver checkmate or to win material.

Let's look at a combination that finishes with mate; the first step is an initial sacrifice to clear the g6 square; then a decoy sacrifice to drag the black king onto f8 and then the bishop and rook quickly finish off the defenceless king.

1. ♔f6+! gxf6 (not accepting the sacrifice leads to immediate mate) 2. ♕f8+! (the decoy sacrifice) 2... ♔xf8 3. ♖h6+ ♔g8 4. ♗e8#

In the following positions the decoy sacrifices result in a gain in material; As always, in the following two examples the decoy sacrifice is followed by

another tactical motif; in our first example it is a fork, in the second a pin.

1. f7+! (a pawn fork that forces either the king or queen onto f7, allowing a devastating knight fork) 1... ♕xf7 2. ♞h6+; otherwise 1... ♔xf7 2. ♞d6+ and White wins easily.

1. ♞d4 ♕xd4 (the pinned queen cannot escape its fate) 2. ♞b5+ and White wins.

Promotion

White to move

Solutions on page 132

The march a pawn makes to promote, either to become a queen or another piece, involves a wide variety of positions of tactical interest. These usually occur in the endgame, when the fewer pieces on the board often have difficulty stopping the progress of an ambitious pawn; however, promotion related tactics can also occur much earlier in the game.

In this position White can play a combination so that his advanced pawn can promote: 1. ♔c8+ ♕h7 2. ♕xe6! fxe6 3. f7 h3 (Black plays his last card; indeed, if White now continues with 4. f8=♕??, there is mate from h2); instead, 4.f8=♖+! ♕g7 5. ♖xg6 ♕xg6 and White wins.

Though promoting to a knight is rare, it occurs more than one would imagine.

In the endgame, tactics related to promotion many times involve a pawn being 'outside the square', thus beyond the king's reach.

In the above position, for example, the king is still in the square of the b4 pawn (i.e. the square whose corners are b4, b8, f4 and f8). However, White can create an obstacle on the black king's path: 1. d6! exd6 2. b5 ♖e5 3. b6 and no matter what Black plays 4. b7 is unstoppable and White wins.

White's pawn sacrifice blocks the f4-b8 diagonal and the black king was unable to remain within the square of the passed pawn as it marched towards promotion.

Even when there are still pieces in play, the rule of the square may create surprises, as with the following game,

in which former World Champion Mikhail Tal was characteristically quick to exploit a tactical opportunity.

White had to deal with the threat of 1... h2 followed by 2... ♖e4+ and then promotion on h1. He thus played 1. ♕f3?, thinking that after an exchange of queens his king would still be within the square of the h3 pawn.

However, Tal saw deeper than that and played 1... ♖xf3+!; and after 2. ♔xf3 ♘e3!, White had no choice but to resign, as the knight move makes the prevention of 3... h2 and subsequent promotion impossible.

Pawn promotion can involve many different tactical motifs. In the following position White uses the threat of promotion to win a rook by means of a skewer.

Things get started with a sacrifice: 1. b6! cxb6 (forced; otherwise White

wins with 2. b7) 2. a7! ♖xa7 (again necessary to prevent 3. a8=♔) 3. ♙g7+ followed by 4. ♖xa7.

The last example shows the themes of pawn promotion and deflection in tandem.

The promotion of Black's passed pawn seems to have been successfully prevented by White. Then came the rude shock of 1... ♖e1+! 2. ♖xe1 ♕d4+! (deflecting the queen from the b4-e1 diagonal) 3. ♕xd4 dxe1=♔#

Drawing tactics

White to move

Solutions on page 133

Tactics are not only for winning material or delivering checkmate.

Sometimes the purpose of the most spectacular combinations is to salvage a draw in what at first sight appears to be a lost position. A startling tactical blow that secures a draw by perpetual check or stalemate is just as rewarding as a brilliant checkmate. Few things are as satisfying as 'swindling' our opponent out of what appeared to be certain victory. Remember, the ability to tenaciously defend is as important as the ability to attack!

The most frequent opportunities to give perpetual check are based on sacrifices that smash open the protection of the castled king.

White's position is critical: Black's threat is the devastating 1... ♖a2+.

However, salvation is at hand with:

1. ♖xg7+! ♔xg7 2. ♕g5+ ♔h8 3. ♕f6+ ♔g8 4. ♕g5+ and perpetual check. If Black tries 1... ♔h8, White has 2. ♖xh7+! ♔xh7 3. ♕h3+ ♔g6 4. ♕g4+ ♔h7 3. ♕h5+ etc.

Stalemate and perpetual check are n't the only means for securing the draw. There is also the liquidation sacrifices, where the objective is to simplify to a theoretically drawn endgame position. It should be noted that tactics are as important in the endgame as in the opening and middlegame.

Notwithstanding that White has a two pawn to zero advantage, Black immediately draws by eliminating the only dangerous pawn: 1... ♖xb3! 2. ♖xb3+ ♔h8. Black knows his endgame theory; if the white bishop does not control the queening square, it's a draw.

492

How to stop mate?

Mixed motifs: White

In the following exercises a variety of motifs are employed. White moves and wins, often using a combination of different tactical elements. Over the board, individual tactical motifs are often hidden in the complexity of the position, and a player must train his eye to recognise how a combination of tactical themes can be put together to achieve his objective, be it mate or winning material.

978

2 bishops are sufficient

Curiosities

Unless indicated, White to move
Solutions on page 142

We conclude with a variety of positions that range from tragicomic resignation with a won position to tactics so exquisite they approach art. Not all our readers will be able to solve these, but this does not prevent us from delighting in the whimsical beauty of tactical opportunities both missed or brilliantly found.

The fact that so many of these positions are from actual games proves that fact is stranger than fiction. However, as elsewhere in the book, some of the following positions are the fruit of a composer's imagination.

Such positions are called 'studies' or 'problems', and though composed, they can be of great value in developing our tactical skills. The first type involves realistic looking positions where the challenge is to find a move sequence that leads to victory, a winning material advantage or a theoretical draw.

In the second type the objective is to find mate in a certain number of moves; in these problems it is of no importance if White has such a decisive advantage that he could win with inaccurate play; the solver must indicate the only solution that leads to checkmate in two, three or more moves.

To whet your appetite here is a celebrated problem created by Sam Loyd in 1859.

White to move and mate in two. The solution is 1. ♔a5!!; each reply by Black results in a different way to checkmate: if 1... ♕c5 2. ♔a1#, if 1... ♕e7 2. ♔e5#, if 1... ♖d7 2. ♘f5#, if 1... ♜e7 2. ♔xb4# and so on. You may enjoy finding the remaining ways to deliver mate!

We will finish with a word of warning: being a good tactician does not mean that we have to make startling sacrifices and tactical skirmishes at all costs. Tactics are not an end in themselves, but rather a tool that must bring concrete advantages or make it possible to execute our plans. The use of tactics requires not only creativity and courage, but also prudent

432 – 1. ♜f7! (a pleasing decoy sacrifice)

1...♟xf7 [1...♞f6 2.fxg5 and wins] 2.fxg5+ and Black loses the ♞

Promotion page 65

433 – 1.♟b5 and the ♠ promotes

434 – 1.b8=♞! [1.b8=♞?? stalemate]

435 – 1.♟b7 the ♟ sacrifices itself so the ♠ can promote on the next move

436 – 1.f7 ♟c5 2.♟d4! pinning the ♟ so the ♠ can promote 2...♟xd4 [2...♟b7 3.♟xc5] 3.f8=♞

437 – 1.♟d7! denying access to b6 [1.a7?? ♟b7 2.♟c6 ♟a8 theoretical draw: when the White ♟ approaches it is stalemate] 1...♟c6 [1...♟xd7 2.a7] 2.♟b2 ♟c7 3.♟c3 ♟c6 4.♟d4 ♟c7 5.♟d5 ♟c8 6.♟d6 and mate in 4

438 – 1.♞c8+! ♞xc8 2.♞xc8+ ♟xc8 3.bxa7

439 – 1.♞xb6! axb6 2.a7 and promotes

440 – 1.♟h7! if the ♟ does not control the queening square, if the ♟ can reach the corner it is a draw 1...♟f8 2.♟g4 ♟f7 3.♟f5 ♟f8 5.♟f6 ♟e8 6.♟f5 ♟f8 7.h7 mate next move

441 – 1.♟e8! g2 2.♟d8 g1♞ 3.♟xc7#

442 – 1.c7 ♞xe6 [1...♟d7 2.♞xe7+] 2.c8=♞+

443 – 1.♞h8+!! making way for the ♠ 1...♟xh8 2.g7+ ♟g8 3.♟h7+! ♟xh7 4.g8=♞#

444 – 1.♞b5!! closing the file to protect the ♠ 1...axb5 [1...cxb5 2.b7] 2.b7 ♞xa5 3.b8=♞+ ♟d7 4.♞b7+ and wins

445 – 1.♞f8+! ♟xf8 2.e7a typical endgame tactic: the ♠ attacks the ♟ and then promotes

446 – 1.axb6! ♞xb3 2.bxa7 ♞xb2 3.a8♞ ♞xc3 4.♟d6 and wins

447 – 1.♞d8+ ♞xd8 2.♞f8+ ♟xf8 3.cxd8♞+

448 – 1.g8=♟! a promotion to ♞ or ♞ is immediate stalemate 1...♟g1 2.♟e2+ ♟g2 3.♟d5#

449 – 1.♞xg7+!! the quickest and most elegant 1...♟xg7 2.h6 and the ♠ promotes 2...♞g4 3.h7

450 – 1.♟e6! controlling g7 and promotion is guaranteed 2...♟b3 [2...♟xe6 3.h7] 3.h7

451 – 1.e7 ♟xe7 2.d6 ♟f8 [2...♟d5 3.d7; 2...f5 3.d7] 3.d7 and wins: the ♠ on c6 prevents ♟c6 and the ♟ on e7 keeps the ♟ at bay

452 – 1.♟f7 does the trick: threatening mate 1...♞xf7 2.♞h8+!! the point of the exercise! [2.gxf7+? ♟xf7 and Black wins] 2...♟xh8 3.gxf7 the ♠ promotes and White wins

453 – 1.♞f5!! the idea is the advance to g4 vacating the g2 square 1...♟xf5 2.g4+ ♟xg4 3.♟g2 the

endgame with 3 ♠s to 2 is winning for White

454 – 1.g5 ♟xf5 [1...fxg5 2.f6] 2.gxh6 and the ♟ cannot approach: if there were not a ♠ on f6, the ♟ could move to f6 with a draw 2...c2 3.♟d2 ♟g5 4.h7

455 – 1.exf6! ♞xg7 2.fxg7 and promotes

456 – 1.♞xa7! ...♞xa7 2.bxa7 and the ♠ with a decisive advantage 2...♟c2+ 3.♟d2 ♟xa1 4.♞xa1 0–0 5.a8♞

457 – 1.g8=♞+! the simplest: the resulting pawn endgame is winning for White 1...♞xg8 2.♞xg8+ ♟xg8 3.b4 Svidler–Dreev 2004 1–0 3...♟h7 4.a4 ♟xh6 5.b5

458 – 1.♞e8+ ♞xe8 [1...♟f8 2.♞xf8+! ♞xf8 3.f7+ ♞g7 4.f8♞#] 2.f7+ ♞e5 3.♟xe5+ ♟xe5 4.f8=♞#

459 – 1.♞xe4+! [1.gxh7? ♟xh7 and Black is better] 1...dxe4 2.gxh7 and wins

460 – 1.♟f7 threatening to capture the ♠ 1...h5 2.♟e6 h4 3.♟d5 h3 [3...♟b3 4.♟e4] 4.♟c4 h2 5.♟b4! h1♞ 6.b3# study by Fritz 1939

461 – 1.♟g2! h1♞ [1...♞xg2 2.c8♞#] 2.c8♞#

462 – 1.♟a6+! a rare ♟+ ♟ fork! (the immediate 1.♟e7? is a blunder: after 1...♟c6+ the queening square is controlled) 1...♟xa6 2.♟e7 and now that the black ♟ has been deflected to a6, promotion is inevitable

463 – 1.a6 the ♟ can enter the square and Black has a ♟, but still the ♠ promotes! 1...♟c7 [1...♟c5 2.a7] 2.a7 it is the very presence of the ♟ that prevents the ♟ from approaching!

464 – 1.♟h5! controls g6 and threatens ♟g4+ and h7 1...♟xe5 2.h7 with promotion

465 – 4.h3!! mate in 16! [4.h4+? ♟h5 zugzwang] 4...♟h5 5.h4 zugzwang [5.♟xg8?? ♟xh6 draw] 5...♟xh4 [5...♟b3 6.h7] 6.♟xg8

466 – 1.♟e4!! again the Novotny theme: Black cannot maintain control of both a8 and e8 1...♞exe4 [1...♞hxe4 2.e8♞+ ♞xe8 (2...♟b7 3.a8♞#) 3.a8♞#] 3.a8♞+ ♞xa8 5.e8♞+ ♟b7 6.♞xd7+ ♟b8 7.♞c7#

467 – 1.c5!! not at all easy to find: by not advancing to the 7th rank White gains the ♟ or the ♞! Stopping ♟d6 threatens c7 [1.c7? ♟d6 2.c5 ♟c8 3.axb3 ♟f7 and Black wins; 1.axb3? ♟d6] 1...♞b5 [1...♟xc5 2.c7 and promotes; 1...♞e3 2.cxb7 ♞e8 3.c6] 2.a4!! taking the ♞ away from the key b5 square 2...♞xc5 [2...♟xc5 3.c7] 3.cxb7 and b5 is controlled

468 – The final part of the celebrated study by Saavedra of 1895 1.c8♖!! threatening mate on a8 [1.c8♖? ♖c4+! 2.♖xc4 stalemate] 1...♖a4 forced 2.♗b3 threatening the ♖ and mate on c1

Curiosities page 121

979 – This seems a study, but it is actually from a real game (Kopylov–Karlson 1961, with colours reversed). 1. ♖d6!!, 1...♙xd6 2. ♙e3#, or 1...gxg6 2. ♖c6#, or 1...♖c8 2. ♙xa6#

980 – Black, with a completely won position, played...d4?? 1.♙c3 and mate on h8 cannot be prevented! Garcia-Ivkov 1965 1–0. Had Ivkov not made this blunder, he would have won the tournament ahead of Smyslov (the tournament winner), Fischer and Geller!

981 – 1...♙a5+ and Black wins the ♙ on g5, Djordjevic–Kovacevic 1984 0–1. In subsequent years, other master strength players have made this error eight times ... but on two occasions managing to salvage a draw!

982 – 1.h8♙+! a ♖ or ♗ promotion creates stalemate, whereas a ♙ promotion creates a theoretical draw. Now it is mate in 14 moves with best play!

983 – 1.♙h2! Schlechter–Meitner 1899 1–0, the threat of ♙f2 cannot be met

984 – 1. c1.♙h7! as odd looking as it is effective! The idea is to control g8. Hommeles–Skoblikov 1992 1–0. 1...♙xh7 [1...♙xc5 23.♙xc5+ and mate; 1...♙d6 2.♙e8+! ♙xe8 34.♙xd6+ ♙e7 4.♙xe7+ ♙e8 5.♙f5 and wins] 2.♙xe7+ ♙g8 3.♙xd8 ♙xd8 4.♙e8+ ♙xe8 5.♙xe8#

985 – The famous encounter Von Popiel–Marco 1902. Here Black – not seeing any way to save the pinned ♙ – resigned. In fact, he could have won with 1...♙g1!! threatening mate on h2

2.♙xg1 [2.♙xd7 ♙xh2#] 2...♙xd3 3.♙xd3 ♙xe4

986 – Black threatens the ♖ and the ♙; it is impossible to save both! 1.♙d5+ the power of double check 1...♙d8 [1...♙b7 2.♙c7+ ♙a6 3.♙b6#; 1...♙b8 2.♙c7#] 2.♙c7+ ♙e8 3.♙e7#

987 – 1.♙e5!! strange but true: White wins a piece 1...♙dx5 [1...♙dx5+ 2.dxe5 Black has two pieces hanging] 2.dxe5 The ♙ will win one of the ♙s

988 – 1.♙h7!! Razuvaev–Mestrovic 1981 1–0 1...♙xc8 [1...♙xh7 2.♙xf8] 2.♙xf6+ intermediate check 2...gxf6 3.♙xc8+ and wins

989 – Black has just promoted to a ♙ in order to prevent the fork on f3; remember that 2 ♙s vs. ♙ is a theoretical draw. Now White doesn't seem to have a move, but there is... 1.♙f3+!! ♙xf3+ 2.♙g3 attacking all three ♙s 2...♙e3 the only chance, but now it stalemate! A 1937 study by Kubbel

990 – 1...♙g3!! Other less spectacular moves win too. Wrongly or rightly, many consider this to be the most spectacular tactical move of all time: Levitzky–Marshall 1912. 2.♙xg3 [2.hxg3

♙e2#; 3.fxg3 ♙e2+ 4.♙h1 ♙xf1#] 2...♙e2+ 3.♙h1 ♙xg3+ 4.fxg3 ♙xf1#

991 – Here White accepted a draw offer, but... 1.♙g7!! would have won the game; it threatens ♙f5 mate 1...♙xg7 [1...♙c8 2.♙f5+ ♙xf5 3.gxf5 ♙xg7 4.e4 and wins] 2.♙e6+ ♙f7 3.♙xd8+ with victory

992 – 1.♙g3!! The ♙ is heading to h6 with mate on g7 and there is nothing Black can do about it! 1...♙ce8 2.♙f4 ♙c8 3.♙g5 Short–Timman 1991 1–0

993 – 1.♙g5!! ♙d5 2.♙h6! Weenink–Gans 1936 1–0, and mate g7 is on the way

994 – 1.♙a8! winning a piece: Panczyk–Schurade 1978 1–0 1...♙xa8 [1...♙b7 2.♙xb8 ♙xb8 3.♙xe7+ 2.♙xe7+ ♙h7 3.♙xc8

995 – White has just sacrificed the ♖ on f6 and Black resigned! BUT... 1...♙g4! would have won the game [1...gxf6? 2.♙g3+ ♙h8 3.♙xf6#] 2.hxg4 gxf6 and the g file is not accessible for White, who is simply a ♖ down

996 – Seeing mate on f1 or e1, White threw in the towel, Jonasson–Angantysson 0–1, BUT 1.♙e3! results in f1 being protected by the ♖ [1.♙h1?? exf1♙#] 1...♙xe3+ 2.♙h1 exf1♙+ 3.♙xf1 with a decisive advantage

997 – Faced with the threat of ♙xh3+, White resigned; however, he could have won the game with 1.♙e8+ [1.♙xd4? ♙xe1+] 1...♙d7 2.♙e3!! ♙f4 3.♙xd4+! ♙xd4 4.♙d3 ♙xd3 5.♙e5+

998 – Black has just captured on e1, and White resigned because of 1.♙xe1 ♙e3+ 2.♙d2 ♙xe5, but the intermediate move 1.g6! would have saved the day: the check on g7 is fatal

999 – White resigned at this point in the game Torre–NN played in a simultaneous exhibition in 1924. In fact, Torre could have won by playing 1.♙d6!! [1.f7?? ♙c1+ 2.♙e2 d1♙+] 1...♙xd6 [1...cxd6 now the ♙ on d2 is no longer a threat 2.f7 and wins] 2.g8♙+ ♙d7 [2...♙d8 3.♙xd8+ ♙xd8 4.f7] 3.♙xh7+ ♙c6 4.♙e4+ ♙b6 5.♙b4+ ♙c6 6.♙xc5+ ♙xc5 7.f7 and wins

1000 – 1.♙a7!! with the threat of ♙b6 mate. Steel–NN 1886 1–0

1001 – 1.e4! From a 1935 study by Kasparian. The ♙ not only forks the two ♙s, but also threatens mate on the following move! 1...♙c5 [1...♙g5 2.exd5#] 2.exf5#

Glossary

Tactics

closing lines (a.k.a. interference or obstruction) a tactic that results in the obstruction of a file, rank or diagonal, with short term tactical consequences for the opponent

combination a combination of two or more different tactical motifs in series, often involving a sacrifice

decoy sacrifice a sacrifice that forces the capturing piece to a key square, with negative consequences

deflection a capture or threat forces a piece away from its defence of a piece or a key square

discovery the movement of a piece unmasks a threat by a second piece

double attack (see fork) a single piece threatens two undefended pieces simultaneously.

discovered check the movement of a piece unmasks a check by a second piece

double check the movement of a piece that checks the king unmasks another check from a second piece

double threat the most important single concept in tactics: a move by a single piece creates two problems simultaneously (e.g. threat of mate and unprotected piece capture, threat of mate and pawn promotion, etc.). Most other tactical terms describe specific types of a double threat.

fork a double attack by a pawn or a knight

intermediate move (a.k.a. zwischenzug, intermezzo, or in-between move) an unexpected move by an opponent in a planned tactical sequence

opening lines (a.k.a. clearance) a tactic that results in the opening of a file, rank or diagonal, with short term tactical consequences for the opponent

pin the movement of a piece is impossible or restricted as it is on the same line of attack as the king or a more valuable piece

removing the defender (a.k.a. removing the guard) the capture of a key defending piece, usually involving a sacrifice

sacrifice the capture of a piece by a more valuable piece so as to gain a subsequent tactical or strategic benefit

skewer the movement of a piece under attack would result in the capture of an undefended piece of less value on the same line of attack

windmill a series of repeated discovered checks that result in the capture of several pieces by the piece which unmasks check

Miscellaneous

blockade stopping a pawn's advance by placing (usually) a bishop or knight in front of it

epaulette mate a back rank checkmate made possible because the king's movement is restricted by the presence of a piece of the same colour on each side of the king, usually the rooks

escape square an unoccupied square that an attacked piece can flee to

exchange sacrifice the exchange of a rook for a bishop or knight

the square (a.k.a. the square of the pawn) a simple method for determining if a king can prevent a pawn from promoting. Visualise a square made up of the line between pawn and its promotion square and three other lines of equal length. If an unimpeded king is in that square with the opponent to move, the king can prevent pawn promotion.

hanging piece an undefended piece that is under attack

loose piece an undefended piece that is not under immediate attack

mating net usually quiet moves that trap the king in preparation of mate

Novotny theme this is the term used when a piece is sacrificed on a square where it could be taken by two different opponent pieces – whichever piece makes the capture obstructs the action of the other.

overloaded piece a piece that has more defensive tasks than it can cope with

promotion a pawn reaches the last rank and is substituted by any other piece.

smothered mate a checkmate in which the king cannot move because of the presence of pieces of the same colour on all adjacent squares to the king

stalemate the game is a draw when a player's king is not in check and he can't make a legal move

theoretical draw a known endgame position where a draw is the inevitable result of best play

vacating a square a piece moves with a threat or a sacrificial capture in order to allow access for another piece of the same colour to the square the capturing piece previously occupied

wrong coloured bishop (a.k.a. wrong bishop) a bishop that controls the dark squares in an endgame position where you require a bishop that controls the light squares to win or draw, or vice versa

zugzwang a position that would be sound if you could skip your move, i.e. it is your turn to move, and any move you make will have negative consequences

1001 Chess Exercises for Beginners

*The tactics workbook that explains
the basic concepts, too!*

Chess is 99% tactics. If this celebrated observation is true for the master, how much more so for beginners and casual players! If you want to win more games, nothing works better than training combinations.

There are two types of books on tactics, those that introduce the concepts followed by some examples, and workbooks that contain numerous exercises. Chess masters and trainers Franco Masetti and Roberto Messa have done both: they explain the basic tactical ideas AND provide an enormous amount of exercises for each different theme.

Masetti and Messa have created a great first tactics book.

It teaches you how to:

- **identify weak spots in the position of your opponent**
- **recognize patterns of combinations**
- **visualize tricks.**

1001 Chess Exercises for Beginners can also be used as a course text book, because only the most didactically productive exercises have been used.

Other chess books from New In Chess include:
